## EXPERIENCE

### Senior Software Engineer | Autodesk

APR 2026 - OCT 2026 | Typescript

Shipped features across the re-envisioned Site Design, most notably originating a parking mode prototype from a customer need discovered in a client meeting, which grew into a top strategy priority. Also delivered volume bodies, entity conversion and toolbar improvements, strengthened delivery with a CI vulnerability gate, and drove cross-functional impact through the Design System 3.0 initiative and Autodesk Assistant adoption research. Invested continuously in refining an AI-assisted workflow, mastering tools like Claude and learning their limitations, which significantly increased delivery speed.

### Software Engineer | Distribution Innovation

DEC 2023 - APR 2026 | Typescript, Java

Developing and maintaining eCommerce package system features using Java and React. Took ownership of frontend development within the team, setting standards and applying modern best practices to improve speed and reliability. Rebuilt the entire frontend from scratch with a new design system and full test coverage. Implemented code style standardization with Checkstyle, ESLint, Prettier, and GitHub Actions to ensure consistency and reduce review load. Automated frontend API integrations using OpenAPI and custom Mustache templates, and mastered testing with Playwright, Ladle, and Vitest.

### Software Engineer | Oda

JAN 2022 - NOV 2023 | Typescript, Python

Delivery capacity and route planning tools, which is one of the core areas of the product. Focusing on clean, simple and well-tested code. Have made a huge impact on all projects I have contributed to, from ideas and architecture to delivering excellent technical solutions.

### Software Engineer | Neonomics

AUG 2020 - DEC 2021 | Java

Banks integration into the platform and maintenance of existing implementations, testing internally and externally and adding new features. Initiative and implementation of the team's coding standards.

### Software Engineer | Satalia

JAN 2020 - APR 2020 | Python

Creating a new benchmarking system. Data Analysis.

### Internships | Satalia, Lithuanian Railways

2019

Software engineering intern at Satalia · IT project management intern at Lithuanian Railways, delivering a real project from scratch with full requirements documentation.

## ABOUT ME

I am an ambitious and creative engineer who enjoys building tools from scratch and solving complex problems. I actively share ideas that often shape team decisions. I care deeply about people's experience with software, focusing on clean, well-tested, and intuitive solutions. I also aspire to mentor others and inspire women in STEM.

## EDUCATION

### Bachelor degree in Software Systems | Kaunas University of Technology

SEP 2016 - JUN 2020 | 243 ECTS

Top grade in final thesis on route planning and optimization. Study exchange at top South Korean universities in 2018. OOP tutor for fellow students, helping understand programming concepts and theory of object-oriented programming (2019–2020).

## SKILLS

### Languages & Frameworks

Typescript (React), Java (Spring, Spark), Python (Django), C#

### Tools & Technologies

Playwright, Ladle, Vitest, Checkstyle, ESLint, Prettier, GitHub Actions, OpenAPI, Mustache templates

### Soft Skills

Collaboration & Leadership, Mentorship, Analytical Thinking, Research & Problem Solving, Open-mindedness, Independence

## LANGUAGES

Norwegian (B1), English (C1), Lithuanian (Native)
